The Keck Institute for Space Studies
presents a free public lecture:

Science in Cyberspace

Professor George Djorgovski
California Institute of Technology

Tuesday, December 13, 2011

8:00 pm

Hameetman Auditorium

Cahill Building

California Institute of Technology

Science, scholarship, and education are being transformed by the advances in computation and information technology. Much of the scholarly work, including data, tools for their exploration and theoretical modeling, literature, and collaboration tools, are now moving to virtual environments.

The exponential growth of data volumes, and the simultaneous increase in the data complexity offer both new scientific opportunities and new challenges for knowledge discovery in massive and complex data sets and data streams.

We are now developing new methodologies for the scientific research in the 21st century.

No registration is required for this free lecture.
Seating is limited and is available on a first come, first served basis.
This lecture will be videotaped.
